or in pdf: <http://www.amperefitz.com/phase.symmetry.b&w.pdf>

" . . .

The foundation of general relativity is that all these things are spinning and orbiting on *geodesics*.

A *geodesic* in general relativity is the shortest path through this spacetime continuum.

In addition to this phase symmetry tells us something else important about a geodesic:

A *geodesic*, in phase symmetry, is a path where **repulsive**

forces and **attractive** forces are evenly balanced (*surroundings, where half the forces emanate from, must be considered*).

General relativity tells us that if you give an entity either linear or spin motion then this entity will assume the shortest path — *a geodesic* — through the existing spacetime continuum.

Phase symmetry tells us, however, that wherever an entity is placed in this universe it will end up — *on a geodesic* — with a speed and spin where repulsive and attracting forces are equalized (*surroundings, where half the forces emanate from, must be considered*).

**Therefore, spin and orbit frequencies take place only to equalize attracting and repelling forces.**

This actually works in the microcosm too if you realize that you are now in a higher frequency spacetime realm and these entities are moving on *geodesics* in this new and different frequency spacetime realm: So phase symmetry tells us a lot more than general relativity does and it works in the microcosm too.

Milo Wolff's scalar, spinning, standing wave, spacetime realm **mandates** that these spinning, standing wave entities move on *geodesics*.
